## Apex AGM Training Agenda

- Apex AGM Capabilities Overview
- Hardware Review
- Standard Operation
- PigView Mobile Bluetooth Application
- PigView Web – Basic Operation
- PigView Web - Pre Run Setup
- PigView Web – Live Remote Tracking

## Apex AGM Overview and Capabilities

- Detect PIGS using Magnetic Bodies, ELF Transmitters, or passively with a Geophone
- Integrated Cellular Communications, Bluetooth and GPS
- Interface to Iridium Satellite Modems for Worldwide Remote Access
- Raw Recording of Sensor Data and Detections to Removeable Readable Storage
- Access to PigView Software Suite
  - PigView Mobile Android Application – Setup, Config, Field Tracking and Cellular Link
  - PigView Web – Web Based Application – Configuration, Live Tracking over the Internet
  - PigView Analytics – View data from AGMs – Detections or RAW, push data to cloud
  - Firmware Updater

## Apex AGM Hardware

- **Power Button and LED Indicator**
  - Slow Flash – ON and Booted
  - Fast Flash – On and Booted and Connected to Internet
  - Turn On – Single Push, Versions that Beep Will Beep On Boot
  - Turn Off - Hold for More than 5 seconds – Blue Light Solid, Then OFF (~20 seconds)
- **Internal Electromagnetic Antenna**
  - Always Fold Out When Deployed
  - Deploy PARALLEL To the Pipeline
  - Fold In During Travel
- **Cellular Antenna**
  - Install Hand Tight and Upright
- **Batteries**
  - 6 x D Cell alkaline
  - About 6 days in Active mode at room temperature
  - **DO NOT OVERTIGHTEN SCREWS ON BATTERY COMPARTMENT – HAND TIGHT ONLY**

## Apex AGM Hardware

- **USB Port**
  - Firmware Updates Only
- **SD Card**
  - Removable Storage -
  - ONLINE, OFFLINE, ROOT folders
  - .ofl, .onl files – passage (trip) files – can be viewed I Pig View Analytics OR PigView Mobile Android App
  - .agm – raw data file
  - Can Be Viewed in PigView Analytics
- **GEO Port**
  - Connect External Geophone
- **MAG Port**
  - Connect External "Swamp" Antenna
- **SAT Port**
  - Attach External Satellite Modem, External Power In, RS232 Data Link
  - Dust cap

## Apex AGM Standard Ops

- **Install Batteries**
  - Remove Lid – **Make Sure all Screws are Disengaged Before Pulling Off**
  - Try to use Fresh Batteries
  - **DO NOT OVERTIGHTEN LID – Torque Spec**
  - Battery Status can be viewed through Bluetooth or web interface
  - Release Batteries from NON Spring End First
  - Check that SD CARD is INSTALLED
- **Install Cell Antenna**
  - Make sure Antenna is Hand tight
- **Press Power Button Once Briefly**
  - Wait for solid Blue Light, then flashing, wait for fast flash if using cell (~90 seconds)
- **Setup Settings over Bluetooth or Cell**
  - Settings are Stored in Non-Volatile Memory and Survive the Next Power Cycle
- **Deploy With Antenna Out and Parallel to Pipe**

Only These  
Need to Be  
Done After  
Initial Setup

## Apex AGM Non-Standard Ops

- **Satellite Setup**

- **BEFORE POWER UP – Attach Iridium Modem to SAT Port**
- You **MUST** Use Fresh Batteries
- Hardware Versions 2 and Above are Best
- LIMIT FALSE DETECTIONS WITH SATELITE LINK – Data is Expensive!
  - Turn OFF Before Picking up and Driving around
  - Use MAG ONLY if Possible
  - External Antennas Are Ideal
- Check Bluetooth Link if Possible, under CELLULAR ENABLE Tab – check for SAT ON
- Look For Satellite Icon on PigView Web Interface
- SAT LOW BATT indicates the Battery Power is Not High Enough For Transmission

## Apex AGM Non-Standard Ops

- **External Swamp Antenna**

- Connect to MAG Port
- Place Far From Box if On Land – Best Performance
- If Tracking Under Water – Try To Limit Wave Motion
- Get as Close to Pipe As possible – Signal is Much Weaker in Salt Water
- Live Tracking is Much More Important – Especially using ELF ONLY

## Apex AGM Non-Standard Ops

- **Geophone Tracking**

- Connect to GEO Port
- Place Far From Box if Possible – Geophones Have Magnets in them!
- Geophone Vibration is Recorded in Raw data
- Snippet is sent as passage – no Detection on Geophone
- Listen Live from anywhere with the internet
- Stream and Listen Over Bluetooth
- Count Welds and Get Instantaneous Speeds
- Great For Live Tracking

## Apex AGM Non-Standard Ops

- **Other Accessories**

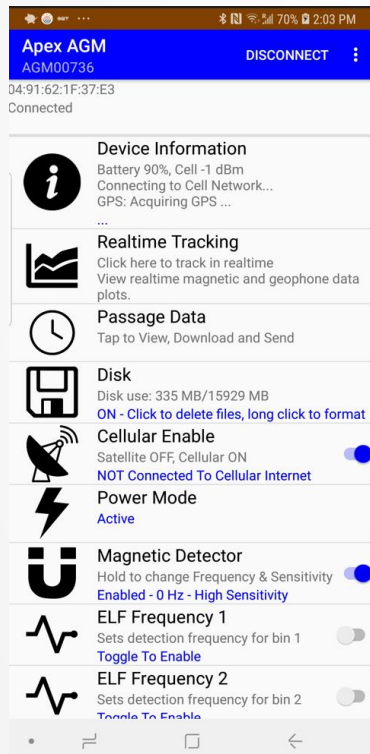

- External Power Adapter
- Receiver Handle
- Light Kit
- Cabled Cell Antenna
- Y Adapter
- \*\* External Power Pack
- \*\* Internal Power Pack
- \*\* Solar Charging

## PigView Mobile – Android Bluetooth Application for Apex AGM

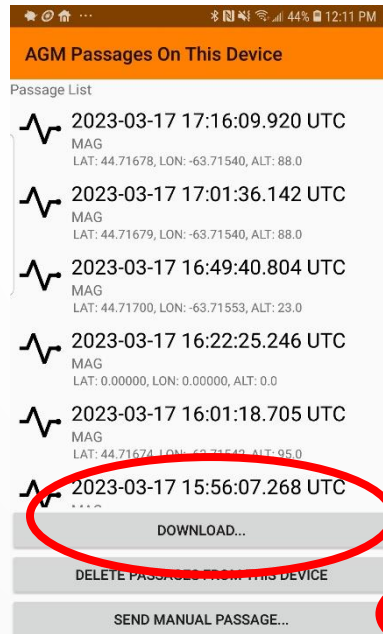

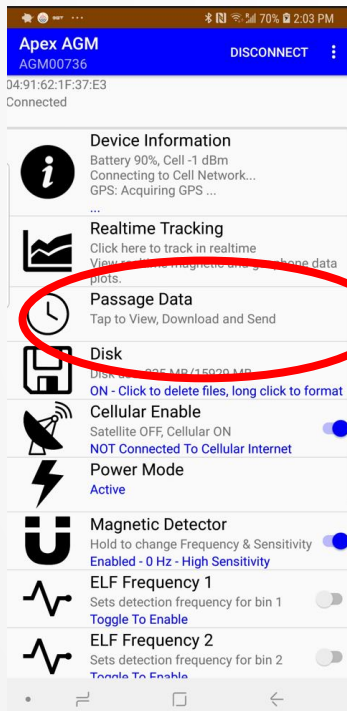

- Application For Setup, In The Field Tracking, Cellular Relay, and Downloading Data
  - Get Basic Device Info – Firmware Version, Hardware Version, Battery Levels
  - Stream Real Time ELF, MAG, And Geophone Audio
  - Get Disk Usage and Format Disk
  - View and Download Passage Data (.onl, .ofl, .agm files)
  - Relay Passage Data to Server if Connected to Internet – Tether to Cell Phone For Best Use Case
  - All Device Settings Can Be Set
  - Best Use is Line of Sight

## PigView Mobile – Android Bluetooth Application for Apex AGM

- Downloading Data - Bluetooth

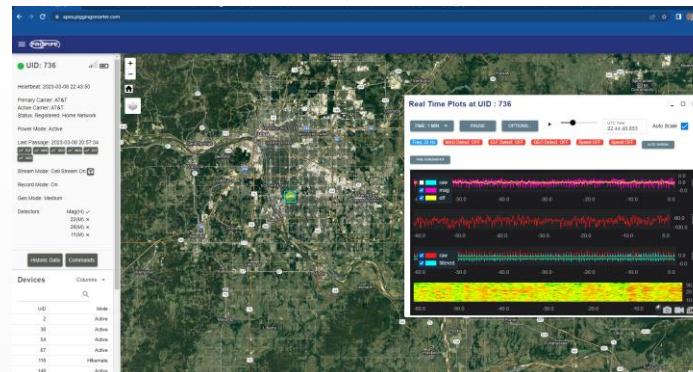

- If the Device is Connected to the Internet – Passages will go to cloud Automatically
- Also Stored in folder on Device – ApexAgm/serialnumber
- Delete From This Device – Delete From tablet Only
- Raw data can also be downloaded and pushed

## PigView Web

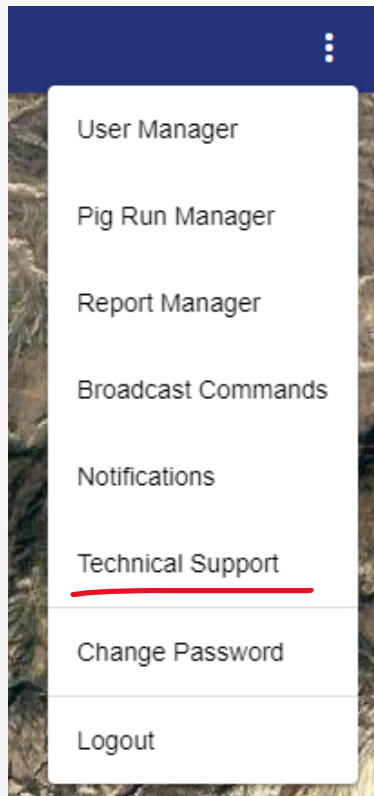

- **Web Based Application For Setup, Remote Tracking, Downloading and Reporting Data**
  - Setup , Configure, Download Multiple AGMS at Once
  - Passages and Historic Data Sent to Internet In Real Time – No Need to Download Individual Boxes
  - Stream Real Time MAG, ELF, and Geophone Audio
  - Live Pig Location on Pipeline Overlay During Pig Run
  - Automatic Notification Of Passages via Text or Email
  - Get Data From the Field Through to Data Analysis Fast and Easy

## PigView Web

- **Technical Support**
  - Documentation
  - Latest firmware Update files
  - Supporting Software Downloads
    - PigView Analytics
    - PigView Mobile
    - Firmware Updater
    - More
  - Training Videos
  - Good Idea to check this regularly for new firmware updates
    - Get bug fixes
    - Latest Features
  - Please let us know your feature suggestions or about any bugs

### Commands

- Apex AGM Web Portal is Two-Way Communications
- Commands Sent While Offline Will Be Queued and Sent On Next Connection
- Power Mode
  - Active – Device Always Detecting, Always Connected to Internet – Most Common Setting
  - Low Power – Device Always Detecting, Only Connects To Internet on Passage, AND Preset Schedule. Device will accept any Queued Commands on Connection To Internet.
  - Hibernate - AGM Is OFF, Not Detecting. Will Connect To The Internet On A Preset Schedule
- Detectors
  - Enable, Disable and Set Sensitivity
- Restart, Shutdown – Not Recommended!
- Stream Enable – Alternate Spot for Starting And Stopping Stream

### Real Time Streaming

- Press The Streaming Icon To Enable Streaming Live ELF, MAG And Geophone Audio (If Geophone Connected)
- Close The Streaming Window To End Streaming Session
  - Caution: Only Admins Can Enable Disable Stream
  - If Stream Is Disabled, it ends Streaming to All users listening to Stream
  - If You're Having Issues Refreshing the Browser window Often Helps
- All Streamed Data is Backed up in the Cloud and Timestamped

## PigView Web

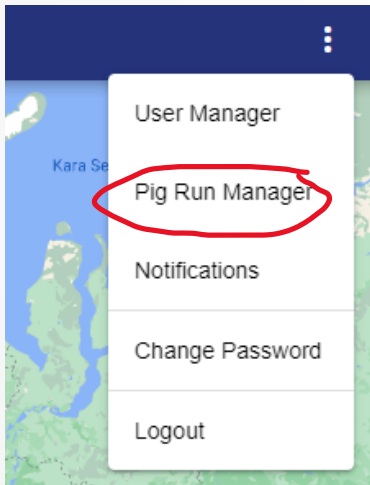

- **User Manager**

- Allows Admins To Create Accounts
- Users Name
- Enter Email (Used for Login and Email Alerts)
- Phone Number (Used for Text Message Notifications)
- Role – Admin OR Viewer
  - Admin has No restrictions – can see any Pig Run and Send Commands, Verify Passages
  - Viewer – Can only See AGMS and Data Associated With A Pig Run They Are On The Notification List For
  - Viewer can Join any Streaming data Session, BUT Cannot start or Stop one

## PigView Web

- **Pig Run Manager**

- Setup A Pig Run and AGMs Before A Run
- Setup Live Tracking Data And Notifications (If Required)
- Launch a Pig
- View and Generate Report From Completed Pig Run

### Pig Run Manager – New Pig Run

#### CSV Pig Run Configuration

- Enter .CSV File with Survey Data
- If You Have No Survey data, Just Enter Rough Launch And Receive Coordinates – Real Data can Be Added Later
- CSV File MUST Follow Specific Template

	A	B	C	D	E
1	AGM Marker Name	Latitude	Longitude	State	Description
2	Launch	27.91038213	-97.41098207	SKIP	Launch
3	AGM 1	27.91730731	-97.40908239	TRACK	AGM
4	AGM 2	27.91700858	-97.39256417	TRACK	AGM
5	AGM 3	27.83934744	-97.19725771	TRACK	AGM
6	Receive	27.82992438	-97.19718396	SKIP	Receive

- AGM Marker Name – Must Be Unique and In Order
- State – If this is a location that will be tracked use TRACK, if it is a feature you want to appear on the map but won't be tracked use SKIP If you are unsure use TRACK it can be changed during a run or later
- Description – Description of Feature, you can use: LAUNCH, RECEIVE, AGM, TAP, BEND, VALVE, ATTCHMENT, WELD, PIPE – this just changes the icon on map overlay
- Most of the time use AGM
- Save as .CSV (Comma Delimited) file

## PigView Web

### • Pig Run Manager – Start A Pig Run

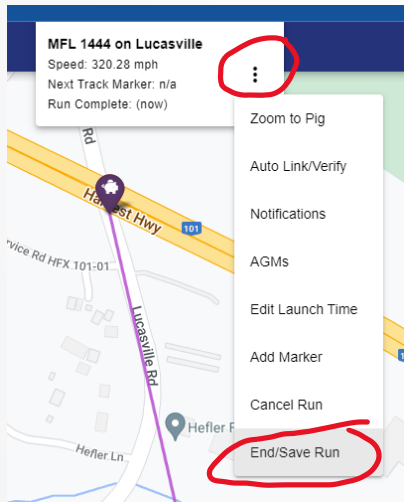

- Select The Run
- Click The Launch Pig Button
- Choose The Pig to Launch
- Enter the Launch Time in **UTC** – This can be edited later
- Once Launched – Pig Run Appears as Pipeline Overlay and a PIG Icon Moves from Launch Location to First Marker
- Once Launched AGM markers with an internet connection and at a marker location (Linked State) turn **RED**
- Once Launched AGM markers with NO internet connection and at a marker location (Linked State) turn **BLUE**
- A Blue Circle will appear at each marker, indicating the radius (100 meters) that will link an AGM to that surveyed Marker

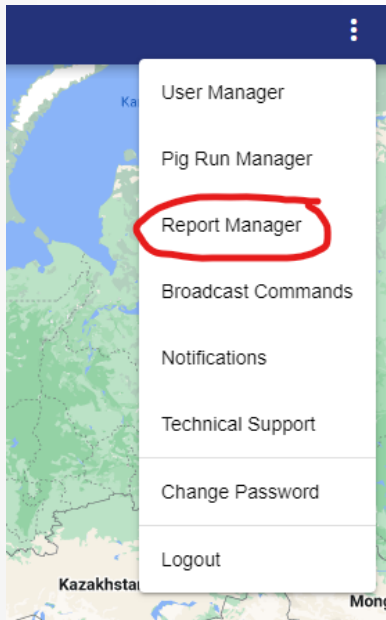

## PigView Web

- **Pig Run Manager – Ending a Pig Run**
  - Click End/Save Run
  - Enter Receive Time in UTC
- Once A Pig Run Is Complete All Passage Data Should Be Already at The Server For Marker Locations That Had an AGM that Had an Active Connection to The Internet at The time of the Passage
- How To Get Any Remaining Passages?
  - If You Used Broadcast Commands, then Downloading Should Start On The Receive Event
  - What If AGMS Have No Connection At Receive?
    - They Will Download When They Get A Connection
  - What IF The Connection is Intermittent?
    - Send Another Broadcast Command From a Good Location
    - Use Bluetooth

## PigView Web

- **Report Manager**
  - Allows Users to export Passage Reports
  - Can Run Reports Based on:
    - Start Stop Time AND Specific AGMs
    - By Completed Pig Run
      - Uses AGMs, And Launch Receive Date/Times For runs

## PigView Web

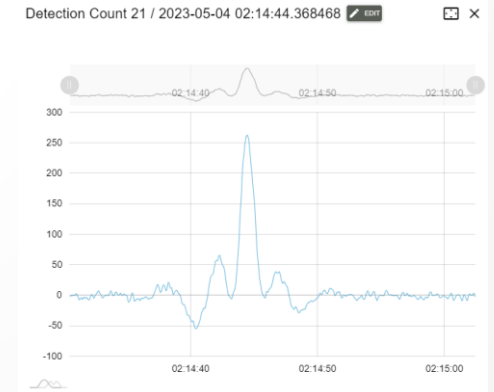

### Report Manager

- View and Verify Passages
- Edit Passage Times
- Export as CSV (.Pro)

## PigView Web – Live Remote Tracking

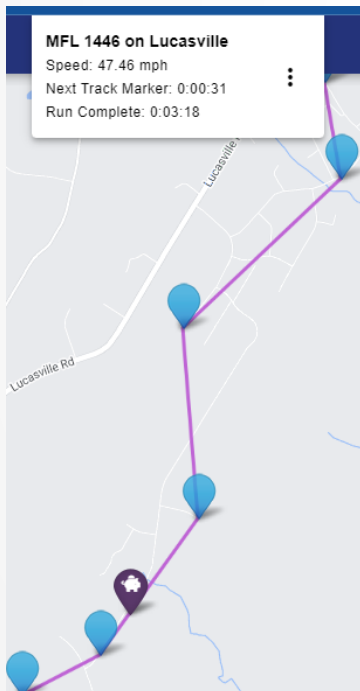

- **Live Remote Tracking**

- The Main Jobs of The Remote Live Tracker are

- Launch The Pig Run, End The Pig Run
- Verify Passages at Each Marker Location
- Keep The Pig Icon Moving at Locations Where AGMs Are Not Present By Skipping Or Adding a Manual Passage
- Add a Marker to AGM Locations That Were Not Entered In a Survey
- Download Passages In Real Time and Update the Pig Run
- Back Up and Communicate With the Trackers In The Field, Report Weld Counts and Speeds, Passage Info
- Add Redundancy On Detections Using Streaming Detectors

## PigView Web – Live Remote Tracking

- **Live Remote Tracking – Verify Passage**
  - Click On The AGM Marker, Select View Passages
  - A List Of Passages That Have Occurred at This Marker Will Appear
  - Click The Red Icon To Turn it Green and “Verify” The Passage
  - Note – This is automatic if a marker is “Auto Verify”
  - Passages can be “Unverified” By Clicking on the green icon

## PigView Web – Live Remote Tracking

- **Live Remote Tracking – Adding a Manual Passage**
  - Click On Marker, Click Add Manual Passage, enter Passage Time in UTC
  - Pig Icon Speed will update with Manual Passage, Notifications can Be sent

## PigView Web – Live Remote Tracking

- **Live Remote Tracking – Add a Survey Marker During a Run**
  - Click On “ADD MARKER” From The Pig Run Panel
  - Click On The Map Where You want to add the Marker
  - Add a UNIQUE Marker Name and Save

## PigView Web – Live Remote Tracking

- **Live Remote Tracking – Download A Passage During A Run**

- Sometimes Passage Data is Not received at the server because of loss of cell signal, These locations are often “SKIPPED” or a MANUAL PASSAGE is added
- These locations can be rectified after a run, or during a run by downloading passages when You do have connectivity
- During a run, use the “DOWNLOAD WITHIN TIME RANGE” command
- Use Heartbeat Data, and Passage Detection Count to narrow the time Window to download Specifically look at:
  - #Offline – HeartBeat Table
  - #Online – HeartBeat Table
  - DetectionCount – Passage Table

**Streaming Options For 736** ✕

☒ Graphing

☒ Speed

☒ Streaming Detectors

☒ MAG

☒ ELF
 

Frequency 22

☐ Geophone

☒ Send Passage Data To DataBase
 ☐ Play Sound On Detect

Set

## Live Remote Tracking – Streaming Detectors

- Simple Detectors That can be used on the Real Time Streaming Data and Added to your Database
- Great Backup for Situations that are difficult to Track – High Interference
- Human Can See the Passage, But machine Cant

## Enable Streaming Detector

- Open Stream Window
- Choose Options
- Choose Streaming Detectors
- Enable MAG and/or ELF, and Send To Database Option
- Set the Threshold on The Graph
- Graph Will Pause on Detection – and send data to server
- This will show up in “View Passages” Window for marker

## PigView Web – Live Remote Tracking

- **Live Remote Tracking – Speed**
  - Calculate Instantaneous Speed From Weld Counts on Geophone Data Stream
- **Set Weld Spacing**
  - Open Stream Window
  - Choose Options
  - Choose Speed
  - Set Weld Space
- **Calculate Speed**
  - Pause Streaming Graph By Pressing “Pause”
  - Move Vertical Cursors on Geophone Plot to Welds
  - Speed is calculated

## PigView Web – Post Run Analysis

- What If you cant find A passage?
  - First Check to See if it needs to be downloaded
    - Check Historic Data, Heartbeats – Detection Count and # of offline and Online Files
  - Download Raw Data

## Update Device Firmware

- Turn on Unit With FRESH Batteries
- Wait for Unit to boot fully
- Open Bottom Lid – Locate Micro USB Connector
- Plug in Micro USB Cable Into USB Port From Your Computer
- Open TRSTM Updater Application
- Browse to .dfu File
- Click Start Update
- Update takes about 2 minutes
- If Successful, Message will appear, and unit will restart
